

Greywater Motion

Currently not many greywater systems are being purchased because of the economic downturn. As we have seen only a few DA's have been put through over the last year.

Recycling of greywater makes the most effective use of rainwater. Not only is it replacing freshwater in washing clothes the water is then used to water gardens.

As you can see from the sample costing, putting in a greywater system is going to take some time to pay for itself. People putting in these systems are dedicated to reducing their use of fresh water and I believe that they should not face the burden of a further charge from Council.

Council, by way of rebating their charge to complying systems, can do their bit for the environment and encourage the fitting of greywater systems rather than offering a deterrent.

SRA weeds

A resident near to Hurlstone Park station showed me weeds that were growing higher than his back fence. The weeds were on SRA property.

I believe that we need to express our concern that the SRA is not keeping noxious weeds under control by writing to them and asking them to exercise greater vigilance in regularly maintaining their property.
